

Chronologie und Siedlungsstrukturen der Linienbandkeramischen Kultur im Donnersbergkreis

Band 2: Anhang (Karten und Tafeln)

Inauguraldissertation zur Erlangung der Doktorwürde der
Philosophischen Fakultät der Universität Heidelberg

Vorgelegt von: Gergely Kápolnási

Erstgutachter: Prof. Dr. Joseph Maran
Zweitgutachterin: PD Dr. Maria Ivanova

09. Februar 2018

Legende zu den Bodenkarten (Karten 2-62):

(Die Daten der Karten 2 bis 62 sowie die folgenden Legendenbeschreibungen basieren auf den Bodenübersichtskarten CC 6310 und CC 7110, hrsg. von der Bundesanstalt für Geowissenschaften und Rohstoffe in Zusammenarbeit mit den Staatlichen Geologischen Diensten der Bundesrepublik Deutschland, Hannover 2015.)

Rendzinen aus flachem Schuttschluffmergel über Kalkstein, Pararendzinen aus Schlufftonmergel über Kalkstein, Rigosole aus Grus führendem Lehmmergel über Kalkstein, Braunerden aus Flugsand über tiefer carbonatischer Tonfließerde aus Kalkstein.

Pararendzinen aus tertiärem Tonmergel, Kolluvisole aus Grus führendem Kolluvialtonmergel, Rigosole aus tertiärem Tonmergel, Parabraunerden aus Lösslehmfließerde über tiefem carbonatischen Ton (Tertiär).

Kalktschernoseme, Pararendzinen aus Löss, Kolluvisole aus holozän umgelagertem Löss.

Parabraunerden und erodierte Parabraunerden aus Löss, Tschernosem-Parabraunerden, Pararendzinen aus Löss, Kolluvisole aus umgelagertem Löss.

Pseudovergleyte Regosole aus Schutt führender Schlufffließerde über flacher Schutt führender Tonfließerde aus Breccie, Tuff oder Tuffit (Oberrotliegendes), Braunerden aus Kies führender Schlufffließerde über flacher Kies führender Tonfließerde aus Breccie (Oberrotliegendes).

Pelosole aus Tonfließerde über Verwitterungston aus Tonstein (Oberrotliegendes), Braunerden aus Kies führender Schlufffließerde über flachem Verwitterungston aus Tonstein (Oberrotliegendes).

Erodierte Parabraunerden aus Löss und Pararendzinen aus Löss über tiefem tertiären Sand, podsolige Pseudogleye aus Grus führendem Sand und Lehm über tiefem tertiären Ton.

Erodierte Parabraunerden aus Löss über tiefem Verwitterungston (Tonstein/Oberrotliegendes), Pararendzinen aus Schuttlehm über Rotliegend-Sandstein (Niersteiner Horst).

Regosole aus Grus führender Schlufffließerde über verwittertem Schluffstein (Silt- und Tonstein/Unterrotliegendes) und Braunerden aus Schutt führender Schlufffließerde über flacher Schutt führender Tonfließerde aus Tonstein (Unterrotliegendes).

Regosole und Braunerden aus flacher Schutt führender Sandfließerde über Sandschuttfließerde aus Sandstein (Rotliegendes) und Regosole und Braunerden aus flacher Schuttsandfließerde über Sandschuttfließerde aus Sandstein (Rotliegendes), Ranker aus flacher Schutt führender Sandfließerde über Sandstein.

Regosole und Braunerden aus flacher Lehmfließerde über Schuttlehmfließerde aus Verwitterungsmaterial intermediärer bis basischer Vulkanite des Rotliegend.

Erodierte Braunerden aus Schutt führendem Sand über Rhyolith, Regosole aus flachem Schuttsand über Verwitterungsschutt aus Rhyolith oder Dacit, podsolige Braunerden aus Schuttschluff über tiefem Verwitterungsschutt aus Rhyolith oder Dacit, selten Felshumusböden über flachem Rhyolith oder Dacit.

Braunerden und Regosole aus Kiessandfließerde über Verwitterungssandkies aus Konglomerat (Unterer Buntsandstein) und pseudovergleyte Parabraunerde-Braunerden aus Sand- und Lehmfließerde über tiefem Verwitterungsschuttsand aus konglomeratischem Sandstein (Unterer Buntsandstein).

Podsolige Braunerden und Pseudogley-Braunerden aus Kies führender Sandfließerde über Verwitterungsschuttsand aus konglomeratischem Sandstein (Mittlerer Buntsandstein), Regosole aus flacher Schutt führender Sandfließerde über Verwitterungsschuttsand aus konglomeratischem Sandstein (Unterer Buntsandstein).

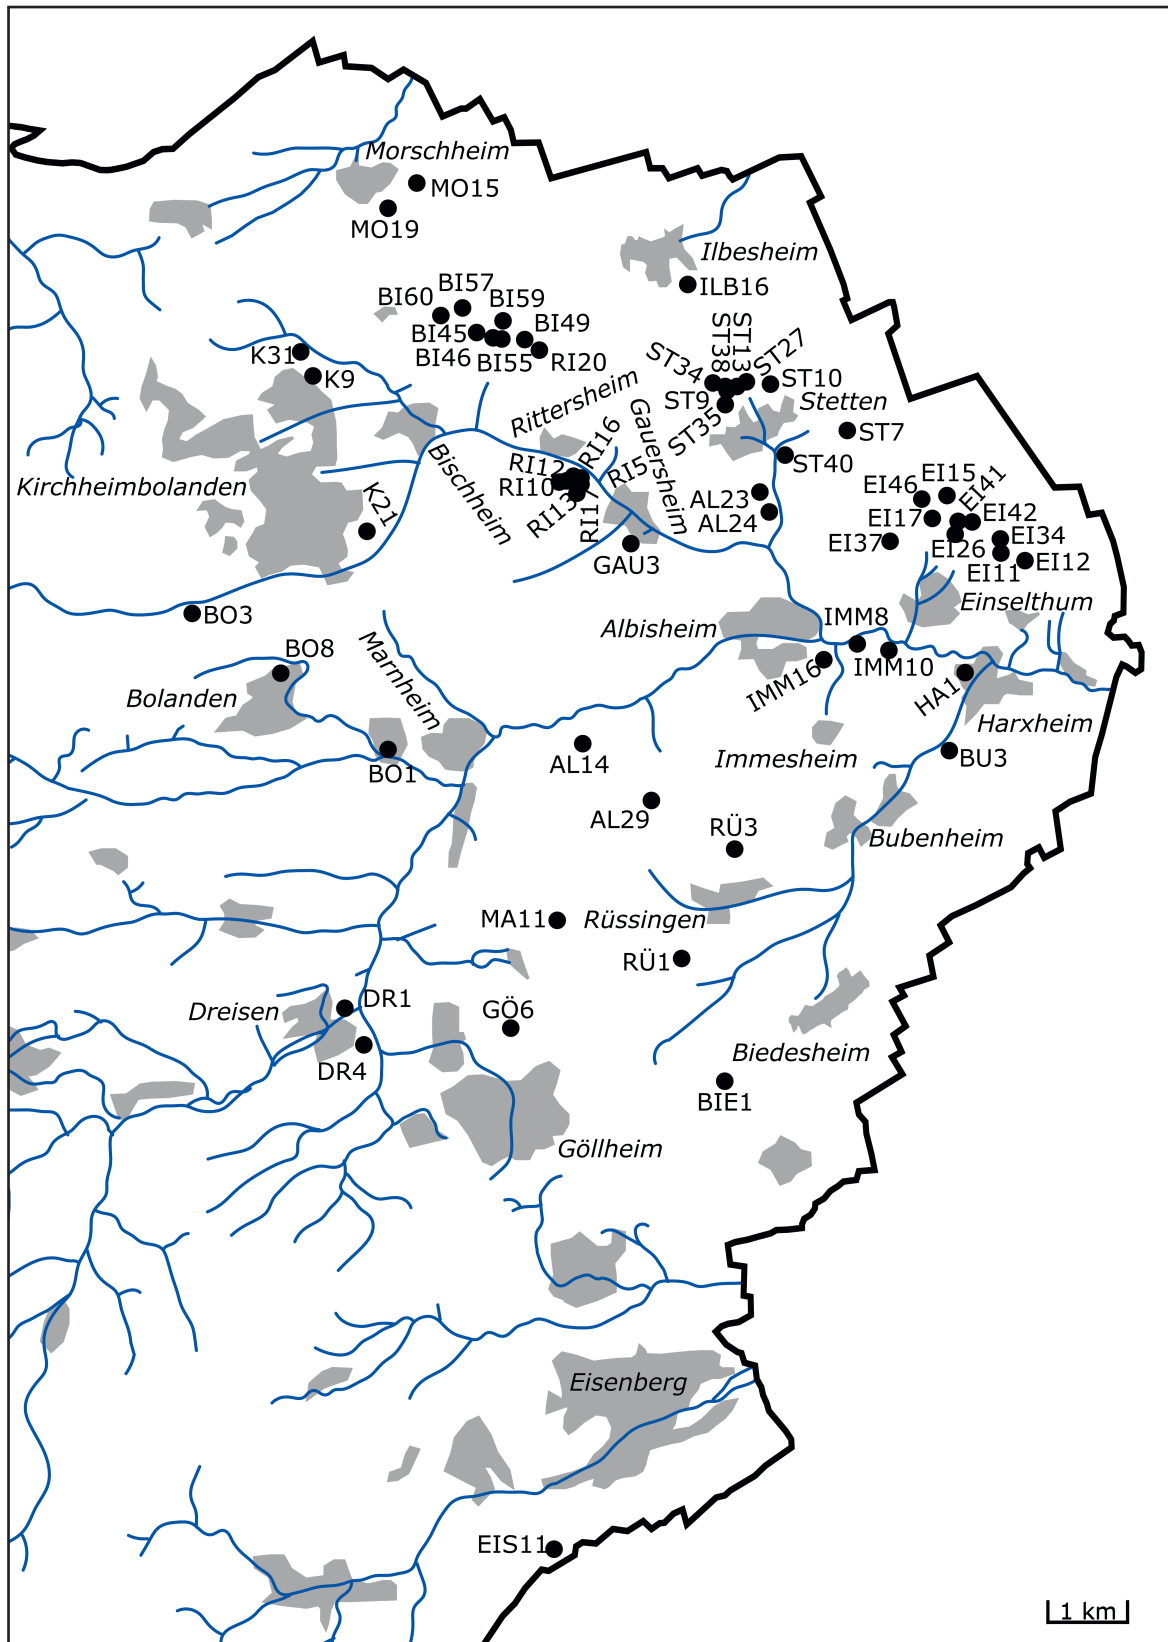

Braunerden, podsolige Braunerden, Braunerde-Podsole aus Schutt führender Sandfließerde über Schuttsandfließerde aus Sandstein (Mittlerer Buntsandstein), Regosole aus flacher Schuttsandfließerde über Verwitterungsschuttsand aus Sandstein (Mittlerer Buntsandstein)

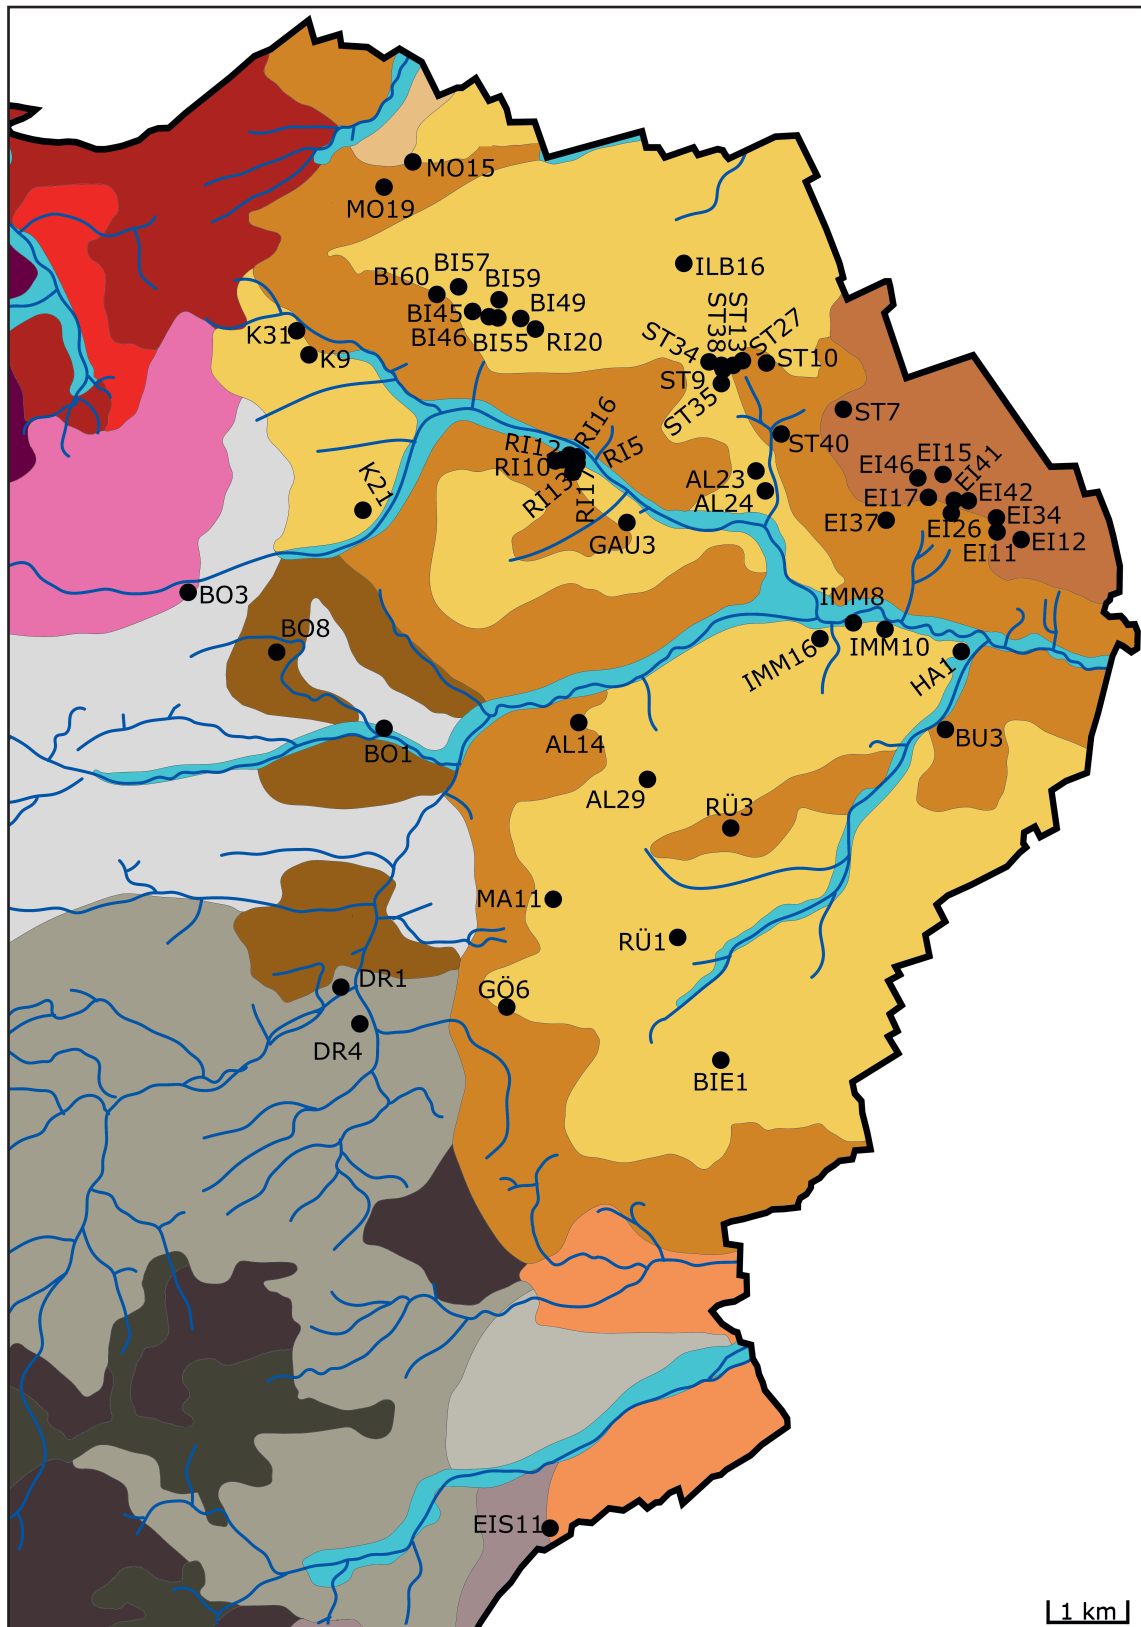

Braunerde-Podsole aus Blockschutt führenden Sandfließerden (Unterer Buntsandstein) und podsolige Braunerden aus Sandfließerde über Schuttsandfließerde aus konglomeratischem Sandstein (Unterer Buntsandstein).

Vegen und Gley-Vegen aus carbonatischem Auen Schluff bis Auenlehm, Gley-Vegen aus carbonatischem Auenton, Kolluvisole aus holozän umgelagertem Löss

Stetten 38 (ST38)	125B-126A
Die häufigsten Motive im Untersuchungsgebiet	126B-129

Anmerkungen zu den Tafeln

Alle Zeichnungen im Tafelteil wurden von mir angefertigt. Dass die Zeichnungen in ihrem Stil teilweise voneinander abweichen, ist darin begründet, dass sie über einen Zeitraum von sechs Jahren entstanden sind und ich im Laufe der Zeit immer geübter wurde.¹

Das hier dargestellte Fundmaterial wurde zunächst im Maßstab 1:1 gezeichnet und nach der Digitalisierung verkleinert. Keramik ist im Folgenden im Maßstab 1:2, alle übrigen Funde im Maßstab 2:3 dargestellt.

Jedes Fundstück besitzt eine individuelle Fundnummer. Diese besteht aus folgenden Bestandteilen: Die ersten zwei bis drei Buchstaben der Fundstelle, die Fundstellenummer der GDKE Speyer, ggf. einen Buchstaben zur Unterscheidung des Fundjahres sowie eine fortlaufende Ziffer (z.B. BO3-a01 für ein Objekt vom Fundort Bolanden 3). Im Falle von Kirchheimbolanden 31 wurde eine abweichende Kodierung verwendet, da die Funde hier klar unterschiedlichen Befunden zugeordnet werden können. Hier besteht die Fundnummer aus dem Buchstaben K, gefolgt von der während der Grabung vergebenen Befundnummer, aus einem Buchstaben für einen Quadranten des Befundes und einer fortlaufenden Nummer (z.B. K162b-02 bedeutet, dass das Fundstück aus Befund 162, Quadrant 2 stammt).

Auch bei Kirchheimbolanden 21 wurde ein anderes Kodierungssystem verwendet. K21 steht für Fundort und Fundstellenummer, gefolgt von der Befundnummer und einer immer zweistelligen fortlaufenden Nummer (z.B. K211901 bedeutet, dass das Fundstück aus Befund 19 stammt und die Nummer 01 besitzt).

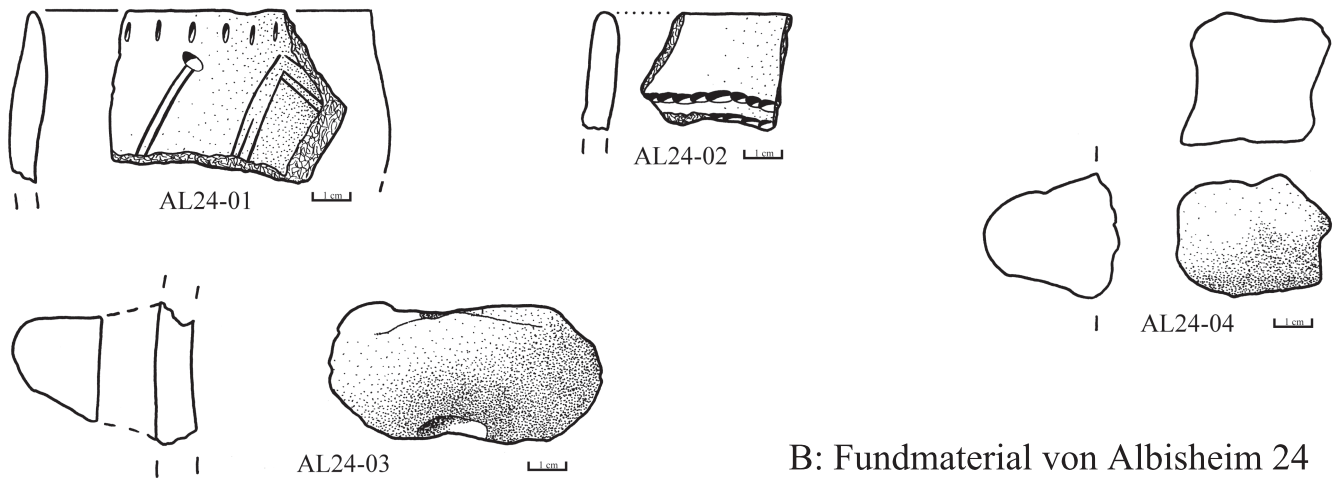

Folgende Symbole wurden in den Zeichnungen verwendet:

- Durchgezogene Linie: Orientierung des Gefäßes weitgehend sicher.
- Gestrichelte Linie: Orientierung des Gefäßes eher unsicher.
- Gepunktete Linie: Orientierung des Gefäßes nicht feststellbar.
- S: Schematische Zeichnung. Aufgrund des schlechten Zustandes des Keramikfragments war eine exakte zeichnerische Dokumentation nicht möglich (z.B. Ritzlinien oder Stiche kaum erkennbar).

Die Tafeln 1-126A zeigen das Fundmaterial des Untersuchungsgebiets. Es wurden nicht alle Fundstücke eines Fundortes gezeichnet, da es sich in vielen Fällen um stark fragmentierte Scherben mit nicht näher definierbaren Motiven handelte. Weitere Informationen hierzu finden sich im Katalog bei den jeweiligen Fundorten.

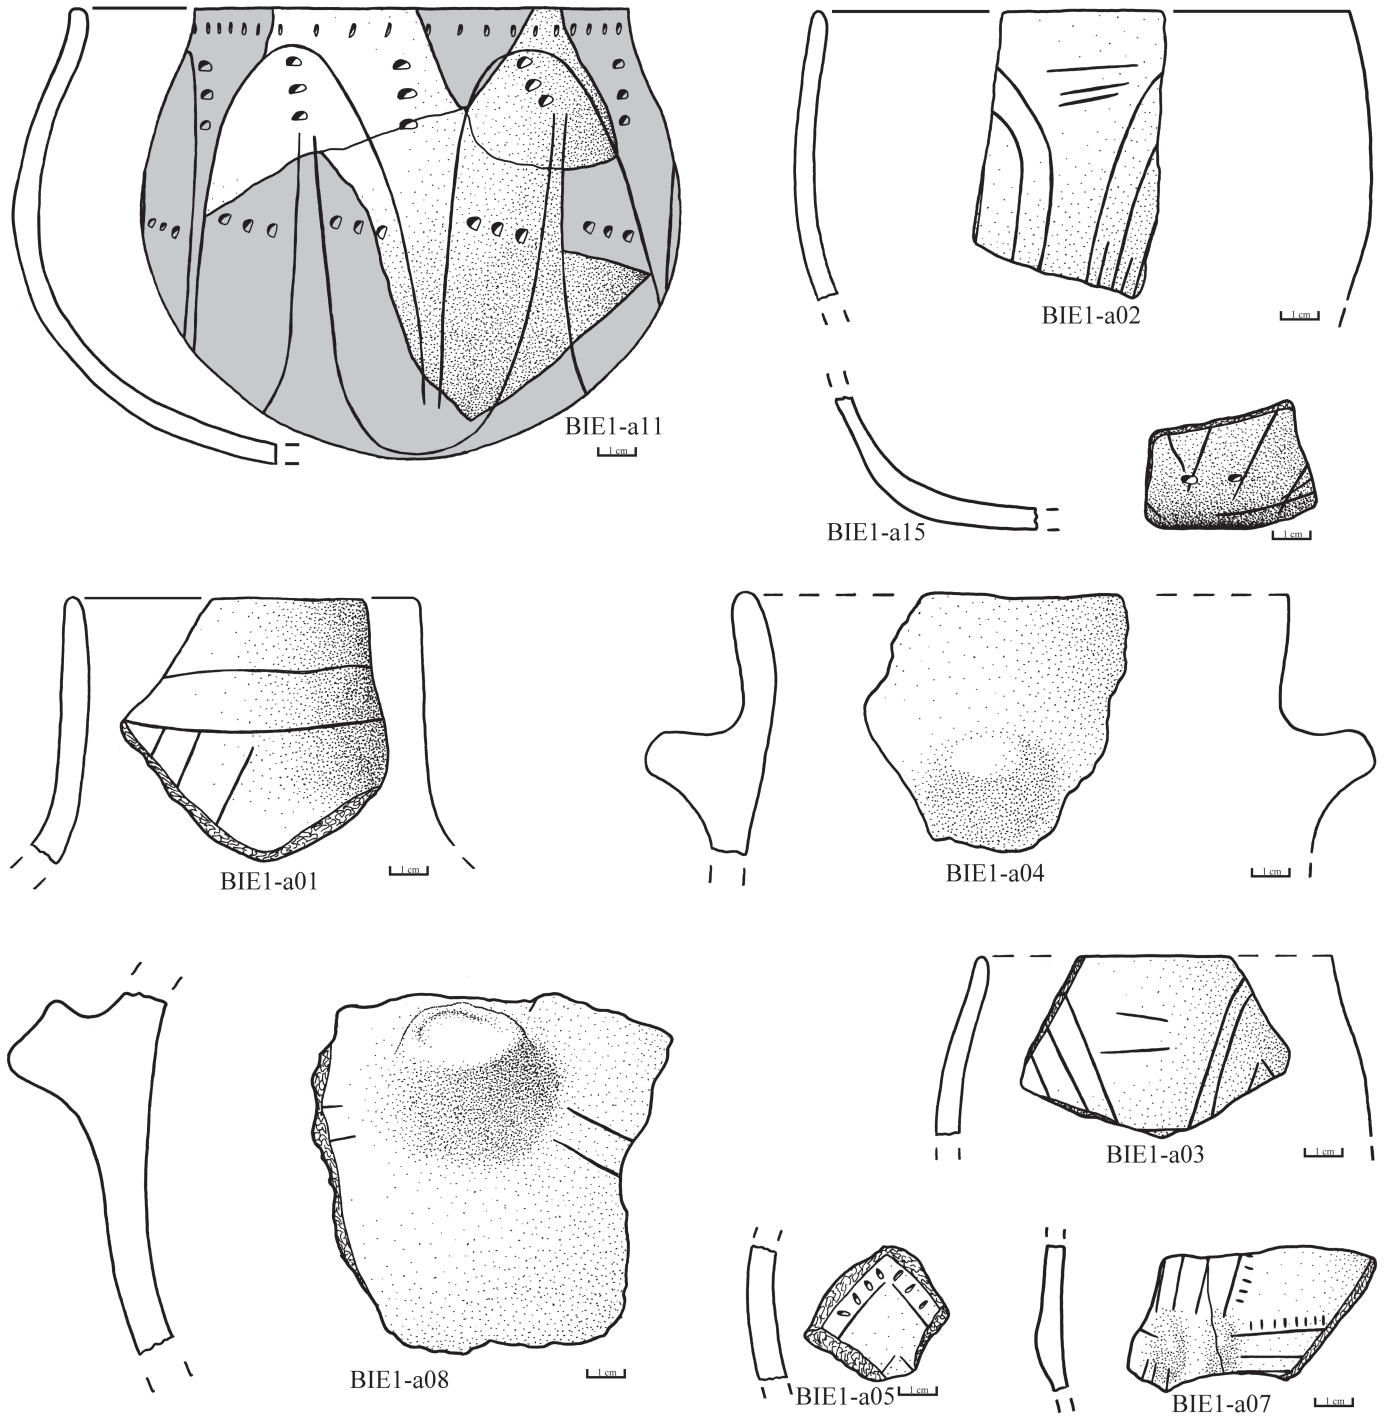

Die Tafeln 126B-129 zeigen schematische Zeichnungen der häufigsten Verzierungs motive des Donnersbergkreises.

¹ An dieser Stelle ein herzlicher Dank an Frau Nina Batram, die mir das Zeichnen beigebracht hatte. Ich konnte viel von ihrer jahrelangen Erfahrung als Fundzeichnerin profitieren. Eventuelle Fehler und Unzulänglichkeiten in meinen Zeichnungen sind einzig und allein auf mein mangelndes Talent in dieser Hinsicht zurückzuführen.
